DETAILED ACTION

Allowable Subject Matter

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8,10,11,12 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Bindig (DE19753930).

Bindig discloses in figs 2A –2C col.2 line 34-68 discloses piezoelectric actuator comprising: a multilayer structure of piezoelectric plies (1), internal electrodes (14) and external electrodes (5). Wherein, the internal electrodes are arranged between the piezoelectric plies having lateral contacting in alternate direction of the internal electrodes, with the external electrodes having two different polarities, two consecutive internal electrodes having the same polarity comprising; one internal electrode always having the other polarity between them and having a common contact point with their assigned external electrode. Bindig also discloses, one of the two internal electrodes having the same polarity passing all the way through the piezoelectric actuator from a

side of it's contacting with the external electrode to an opposite direction. Wherein in, the other internal electrode have the same polarity, always terminating with clearance (a) on a side of the piezoelectric actuator opposite to it's contacting and the internal electrode passing all the way through the piezoelectric actuator terminating in a region of the piezoelectric actuator that is bridge over to prevent a short circuit of the external electrode arranged there. Bindig also discloses, the external electrodes (5) composed of a wave (fig.2c) electrode that bridge over the other internal electrode extended to an end of the piezoelectric ply and not to be contacted, at a distance in a shape of a wave. Bindig, also disclose an insulating ceramic plate at each end of the piezoelectric plies. Wherein, the piezoelectric actuator is uses as a mechanical component.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bindig in view of Sato (EP165407).

As seen above, Bindig substantially discloses the claim invention. However, Bindig do not disclose a valve.

Sato discloses in fig.2 a piezoelectric actuator (22) comprising a flow valve for the purpose of controlling fluid flow in short intervals of time. Therefore, it would have been

obvious to one having ordinary skill in the art at the time modify the actuator of Bindig with the flow valve of Sato for the purpose of driving controlling fluid flow at high speed.
